

Dr. Masami Ando

Masami Ando is an Executive Researcher of Material Research Department in Research Institute of TOTO LTD. He joined TOTO in 1983, receiving Master (1983) & Doctor (1997) degrees of Eng., in materials science and technology from Kyushu University, Japan.

He has developed a variety of ceramic parts for semiconductor manufacturing equipment, as well electrostatics chucks (ESC), low thermal expansion ceramics (Cordierite) and high rigidity ceramics (Si-SiC). His current research interests include joining and additive manufacturing technologies to make complex shape and large size ceramic parts, some of which have been developed in the national R&D project sponsored by the Japanese government.
