

Steve Hant

At University I did a degree in Chemistry followed by a PhD in materials science. My work focused on fabrication and characterization of nanoporous materials where the primary characterization technique was electron microscopy.

Upon completion of my studies I left university for a commercial position and am currently working for Thermo Fisher Scientific as the area sales manager for our electron microscopes in Eastern Europe, Russia and sub Saharan Africa. Thermo Fisher scientific is a large scientific instrumentation provider which employs in excess of 50,000 people. Our company mission is to enable our customers to make the world healthier, cleaner and safer by giving them the tools they need to conduct their research.
