

## **Prof. Satoshi Uchida**

Prof. Satoshi Uchida is a professor (born in 1965) in Research Center for Advanced Science and Technology (RCAST), The University of Tokyo.

He received his PhD from Tohoku University in 1995 and moved to current position in 2006. For more than 15 years his research focused on the field of dye-sensitized solar cells (DSSCs), specifically cell assembling technique such as full-plastic, light-weight, film type as an ubiquitous power source. He is now also showing strong activity of Perovskite Solar Cells research based on the crystallography, surface engineering and electronic simulation.
